Model:

Serial Number:

All instruments used in the calibration of this instrument conform to ASME B40.100 and are traceable to N.I.S.T.. Lubbock Backflow certifies the above listed instrument meets or exceeds all specifications as stated in Title 30 of the Texas Administrative code, subparagraph 290.44 (h) (4) (B) and USC Cross-Connection Control Tenth edition appendix A.7, at the time of testing unless otherwise noted.

Backflow test kit accuracy should be tested annually and maintained by the tester who is solely responsible for backflow prevention assembly test results performed with this calibrated test kit.

Test kit will be tested for accuracy within acceptable range of .2 +/-.

Calibration tests are not a guarantee that the device will pass.

Test kit calibrations are guaranteed to be accurate at time of service. All tests performed with the calibrated test kit are the sole responsibility of the backflow prevention assembly tester. Lubbock Backflow, its owner, and/or any of its affiliates are not responsible for your backflow prevention assembly test results.

Shipping costs will be included in the invoice after you have indicated your shipping preference. Once invoice for shipping and calibration has been paid the device will be shipped within 2 business days unless otherwise arranged.
